

$\Lambda(2350) \ 9/2^+$

$$I(J^P) = 0(\frac{9}{2}^+) \text{ Status: } ***$$

DAUM 68 favors $J^P = 7/2^-$ or $9/2^+$. BRICMAN 70 favors $9/2^+$. LASINSKI 71 suggests three states in this region using a Pomeron + resonances model. There are now also three formation experiments from the College de France-Saclay group, DEBELLEFON 77, BACCARI 77, and DEBELLEFON 78, which find $9/2^+$ in energy-dependent partial-wave analyses of $\bar{K}N \rightarrow \Sigma\pi, \Lambda\omega,$ and $N\bar{K}$.
