N(1440) DECAY MODES

The following branching fractions are our estimates, not fits or averages.

Mode	Fraction (Γ_i/Γ)
$\Gamma_1 N\pi$	60–70 %
$\Gamma_2 N\eta$	
$\Gamma_3 N\pi\pi$	30–40 %
$\Gamma_4 \Delta\pi$	20–30 %
$\Gamma_5 \Delta(1232)\pi, P\text{-wave}$	
$\Gamma_6 N\rho$	<8 %
$\Gamma_7 N\rho, S=1/2, P\text{-wave}$	
$\Gamma_8 N\rho, S=3/2, P\text{-wave}$	
$\Gamma_9 N(\pi\pi)^{I=0}_{S\text{-wave}}$	5–10 %
$\Gamma_{10} p\gamma$	0.035–0.048 %
$\Gamma_{11} p\gamma, \text{helicity}=1/2$	0.035–0.048 %
$\Gamma_{12} n\gamma$	0.009–0.032 %
$\Gamma_{13} n\gamma, \text{helicity}=1/2$	0.009–0.032 %

Note: Signs of couplings from $\pi N \rightarrow N\pi\pi$ analyses were changed in the 1986 edition to agree with the baryon-first convention; the overall phase ambiguity is resolved by choosing a negative sign for the $\Delta(1620) S_{31}$ coupling to $\Delta(1232)\pi$.

N(1440) FOOTNOTES

- ¹ BAKER 79 finds a coupling of the $N(1440)$ to the $N\eta$ channel near (but slightly below) threshold.
- ² LONGACRE 77 pole positions are from a search for poles in the unitarized T-matrix; the first (second) value uses, in addition to $\pi N \rightarrow N\pi\pi$ data, elastic amplitudes from a Saclay (CERN) partial-wave analysis. The other LONGACRE 77 values are from eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.
- ³ From method II of LONGACRE 75: eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.
- ⁴ ARNDT 95 also finds a second-sheet pole with real part = 1383 MeV, $-2 \times$ imaginary part = 210 MeV, and residue with modulus 92 MeV and phase = -54° .
- ⁵ See HOEHLER 93 for a detailed discussion of the evidence for and the pole parameters of N and Δ resonances as determined from Argand diagrams of πN elastic partial-wave amplitudes and from plots of the speeds with which the amplitudes traverse the diagrams.
- ⁶ ARNDT 91 (Soln SM90) also finds a second-sheet pole with real part = 1413 MeV, $-2 \times$ imaginary part = 256 MeV, and residue = $(78 - 153i)$ MeV.
- ⁷ LONGACRE 78 values are from a search for poles in the unitarized T-matrix. The first (second) value uses, in addition to $\pi N \rightarrow N\pi\pi$ data, elastic amplitudes from a Saclay (CERN) partial-wave analysis.
- ⁸ An alternative which cannot be distinguished from this is to have a P_{13} resonance with $M = 1530$ MeV, $\Gamma = 79$ MeV, and elasticity = +0.271.
- ⁹ LONGACRE 77 considers this coupling to be well determined.
- ¹⁰ WADA 84 is inconsistent with other analyses; see the Note on N and Δ Resonances.
- ¹¹ Converted to our conventions using $M = 1486$ MeV, $\Gamma = 613$ MeV from NOELLE 78.
