

## $\Sigma(1620)$ Production Experiments

$$I(J^P) = 1(?^?)$$

### OMITTED FROM SUMMARY TABLE

Formation experiments are listed separately in the previous entry.

The results of CRENNELL 69B at 3.9 GeV/c are not confirmed by SABRE 70 at 3.0 GeV/c. However, at 4.5 GeV/c, AMMANN 70 sees a peak at 1642 MeV which on the basis of branching ratios they do not associate with the  $\Sigma(1670)$ . See MILLER 70 for a review of these conflicts.
