55 Using Roy-Steiner equations with $\pi\pi$ phase shifts from an update of COLANGELO 01 and from GARCIA-MARTIN 11A.			
56 Using an analytic K-matrix model.			
57 Using dispersion integral with phase input from Roy equations and data from MARSISKE 90, BOYER 90, BEHREND 92, UEHARA 08A, and MORI 07.			
58 Used dispersion theory. The value quoted used the $f_0(500)$ pole position of 457 – i276 MeV.			
59 Using p , n polarizabilities from PDG 06 and fitting to $\pi\pi$ phase motion from GARCIA-MARTIN 07 and σ -poles from GARCIA-MARTIN 07 and CAPRINI 06.			
60 Using twice-subtracted dispersion integrals.			
61 Supersedes OLLER 08.

63 Dispersion theory based amplitude analysis of BOYER 90, MARSISKE 90, BEHREND 92, and MORI 07.			
64 Solution B (worse than solution A; still acceptable when systematic uncertainties are included).			
65 Using unitarity and the σ pole position from CAPRINI 06.			
66 This width could equally well be assigned to the $f_0(1370)$. The authors analyse data from BOYER 90 and MARSISKE 90 and report strong correlation with $\gamma\gamma$ width of $f_2(1270)$.			
67 Supersedes MORGAN 90.
