

**$N(1875) 3/2^-$**  $I(J^P) = \frac{1}{2}(3/2^-)$  Status: \*\*\*was  $N(2080)$ 

Before the 2012 *Review*, all the evidence for a  $J^P = 3/2^-$  state with a mass above 1800 MeV was filed under a two-star  $N(2080)$ .

There is now evidence from ANISOVICH 12A for two  $3/2^-$  states in this region, so we have split the older data (according to mass) between a three-star  $N(1875)$  and a two-star  $N(2120)$ .
