$a_0(1710)$

$I^G(J^{PC}) = 1^-(0^{++})$

OMITTED FROM SUMMARY TABLE

Evidence for this state is also inferred from the interference of the K^+K^- and $K^0_S K^0_S$ decays of the $f_0(1710)$ in $D^+_s \to f_0(1710)\pi^+$, leading to a relative branching ratio an order of magnitude larger than expected from isospin symmetry (ABLIKIM 22F). See also the review on "Spectroscopy of Light Meson Resonances."

[1] Using $D_s^+ \to K^+ K^- \pi^+$ from ABLIKIM 21AE. The apparent violation of isospin symmetry may be due to a destructive interference with the $f_0(1710)$ in the $K^+ K^-$ channel, and a constructive interference in the $K^0_S K^0_S$ channel.
