[1] AAIJ 23X studies the $\Lambda_c^+ K^-$ system within $B^- \to \Lambda_c^+ \overline{\Lambda}_c^- K^-$ decays.

[2] AAIJ 20X uses a prompt $\Lambda_c^+ K^-$ sample and reports $2938.55 \pm 0.21 \pm 0.17 \pm 0.14$ MeV where the last uncertainty is due to the Λ_c^+ mass. Observes that the broader resonance at 2930 MeV seen in $B^- \to K^- \Lambda_c^+ \overline{\Lambda}_c^-$ by LI 18A and AUBERT 08H resolves into two narrower peaks at approximately 2939 MeV and 2923 MeV.
