NODE=B104

$\Sigma_c(2455)$

$I(J^P) = 1(\frac{1}{2}^+)$ Status: ∗∗∗∗

The angular distribution of $B^- \rightarrow \Sigma_c(2455)^0 \overline{p}$ favors $J = 1/2$ (as the quark model predicts). $J = 3/2$ is excluded by more than four standard deviations; see AUBERT 08BN.

NODE=B104

$\Sigma_c(2455)$ MASSES

NODE=B104205

The masses are obtained from the mass-difference measurements that follow.
