V_{cb} MEASUREMENTS

For the discussion of V_{cb} measurements, which is not repeated here, see the review on "Determination of $|V_{cb}|$."

The CKM matrix element $|V_{cb}|$ can be determined by studying the rate of the semileptonic decay $B \to D^{(*)}\ell\nu$ as a function of the recoil kinematics of $D^{(*)}$ mesons. Taking advantage of theoretical constraints on the normalization and a linear ω dependence of the form factors provided by Heavy Quark Effective Theory (HQET), the $|V_{cb}|\times F(\omega)$ and ρ^2 (a^2) can be simultaneously extracted from data, where ω is the scalar product of the two-meson four velocities, $F(1)$ is the form factor at zero recoil (ω=1) and ρ^2 is the slope, sometimes denoted as a^2. Using the theoretical input of $F(1)$, a value of $|V_{cb}|$ can be obtained.

"OUR EVALUATION" is an average of the data listed below performed by the Heavy Flavor Averaging Group (HFAG). The average procedure takes into account correlations between the measurements.

$|V_{cb}| \times F(1)$ (from $B^0 \to D^{*-}\ell^+\nu$)

[1] Average of the $B^0 \to D^*(2010)^-\ell^+\nu$ and $B^+ \to \overline{D}^*(2007))\ell^+\nu$ modes with ρ^2 = 1.61 ± 0.09 ± 0.21 and f_{+-} = 0.521 ± 0.012.

[2] Measured using exclusive $B^0 \to D^*(892)^- e^+\nu$ decays with ρ^2= 1.35 ± 0.17 ± 0.19 and a correlation of 0.91.

[3] ABREU 01H measured using about 5000 partial reconstructed D^* sample with a $\rho^2=1.34 \pm 0.14^{+0.24}_{-0.22}$.

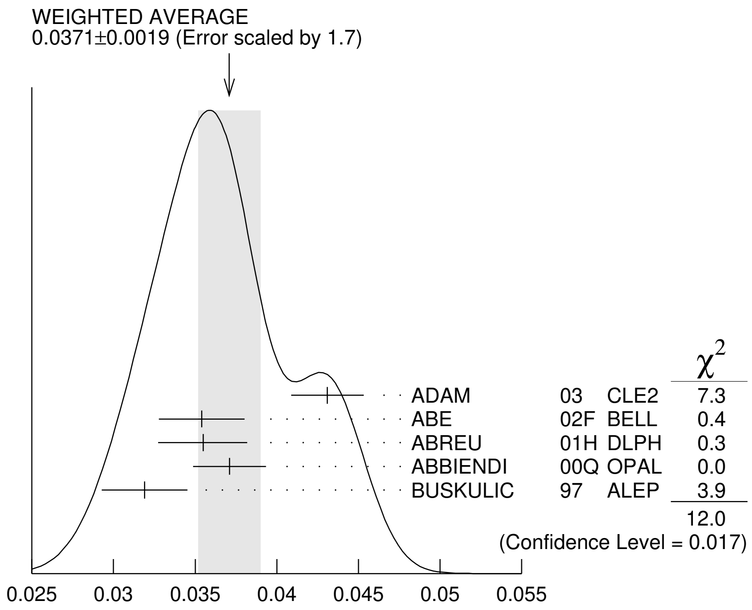
[4] ABBIENDI 00Q: meausred using both inclusively and exclusively reconstructed $D^{*\pm}$ samples with a ρ^2=1.21 $\pm$ 0.12 $\pm$ 0.20. The statistical and systematic correlations between $\left|V_{cb}\right| \times F(1)$ and ρ^2 are 0.90 and 0.54 respectively.

[5] BUSKULIC 97: measured using exclusively reconstructed $D^{*\pm}$ with a a^2=0.31 $\pm$ 0.17 $\pm$ 0.08. The statistical correlation is 0.92.

[6] BRIERE 02 result is based on the same analysis and data sample reported in ADAM 03.

[7] ABREU 96P: measured using both inclusively and exclusively reconstructed $D^{*\pm}$ samples.

[8] BARISH 95: measured using both exclusive reconstructed $B^0 \rightarrow D^{*-} \ell^+ \nu$ and $B^+ \rightarrow D^{*0} \ell^+ \nu$ samples. They report their experiment's uncertainties $\pm$0.0019 $\pm$ 0.0018 $\pm$ 0.0008, where the first error is statistical, the second is systematic, and the third is the uncertainty in the lifetimes. We combine the last two in quadrature.



$\left|V_{cb}\right| \times F(1)$ (from $B^0 \rightarrow D^{*-} \ell^+ \nu$)

$\left|V_{cb}\right| \times F(1)$ (from $B \rightarrow D^- \ell^+ \nu$)

V_{ub} MEASUREMENTS

For the discussion of V_{ub} measurements, which is not repeated here, see the review on "Determination of $|V_{ub}|$."

The CKM matrix element $|V_{ub}|$ can be determined by studying the rate of the charmless semileptonic decay $b \rightarrow u \ell \nu$. Measurements based on on exclusive decay channels and on inclusive techniques can be found in the previous B Listings, which will not repeat here.
