Note: Signs of couplings from $\pi N \rightarrow N\pi\pi$ analyses were changed in the 1986 edition to agree with the baryon-first convention; the overall phase ambiguity is resolved by choosing a negative sign for the $\Delta(1620)$ S_{31} coupling to $\Delta(1232)\pi$.

N(1440) FOOTNOTES

[1] BAKER 79 finds a coupling of the $N(1440)$ to the $N\eta$ channel near (but slightly below) threshold.

[2] LONGACRE 77 pole positions are from a search for poles in the unitarized T-matrix; the first (second) value uses, in addition to $\pi N \to N\pi\pi$ data, elastic amplitudes from a Saclay (CERN) partial-wave analysis. The other LONGACRE 77 values are from eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.

[3] From method II of LONGACRE 75: eyeball fits with Breit-Wigner circles to the T-matrix amplitudes.

[4] ARNDT 04 also finds a second-sheet pole with real part = 1385 MeV, $-2 \times$ imaginary part = 166 MeV, and residue with modulus 82 MeV and phase = -51°.

[5] See HOEHLER 93 for a detailed discussion of the evidence for and the pole parameters of N and Δ resonances as determined from Argand diagrams of πN elastic partial-wave amplitudes and from plots of the speeds with which the amplitudes traverse the diagrams.

[6] ARNDT 95 also finds a second-sheet pole with real part = 1383 MeV, $-2\times$imaginary part = 210 MeV, and residue with modulus 92 MeV and phase = -54°.

[7] ARNDT 91 (Soln SM90) also finds a second-sheet pole with real part = 1413 MeV, $-2 \times$ imaginary part = 256 MeV, and residue = $(78-153i)$ MeV.

[8] LONGACRE 78 values are from a search for poles in the unitarized T-matrix. The first (second) value uses, in addition to $\pi N \rightarrow N\pi\pi$ data, elastic amplitudes from a Saclay (CERN) partial-wave analysis.

[9] An alternative which cannot be distinguished from this is to have a P_{13} resonance with M = 1530 MeV, Γ = 79 MeV, and elasticity = +0.271.

[10] LONGACRE 77 considers this coupling to be well determined.

[11] WADA 84 is inconsistent with other analyses; see the Note on N and Δ Resonances.

[12] Converted to our conventions using M = 1486 MeV, Γ = 613 MeV from NOELLE 78.
