

# $\Lambda(1670) S_{01}$

$$I(J^P) = 0(\frac{1}{2}^-) \text{ Status: } ****$$

The measurements of the mass, width, and elasticity published before 1974 are now obsolete and have been omitted. They were last listed in our 1982 edition Physics Letters **111B** 1 (1982).

## $\Lambda(1670)$ DECAY MODES

| Mode                         | Fraction ( $\Gamma_i/\Gamma$ ) |
|------------------------------|--------------------------------|
| $\Gamma_1$ $N\bar{K}$        | 20–30 %                        |
| $\Gamma_2$ $\Sigma\pi$       | 25–55 %                        |
| $\Gamma_3$ $\Lambda\eta$     | 10–25 %                        |
| $\Gamma_4$ $\Sigma(1385)\pi$ |                                |

The above branching fractions are our estimates, not fits or averages.

## $\Lambda(1670)$ BRANCHING RATIOS

See “Sign conventions for resonance couplings” in the Note on  $\Lambda$  and  $\Sigma$  Resonances.

### $\Lambda(1670)$ FOOTNOTES

- <sup>1</sup> GARCIA-RECIO 03 gives pole, not Breit-Wigner, parameters, but the narrow width of the  $\Lambda(1670)$  means there will be little difference.  
<sup>2</sup> MARTIN 77 obtains identical resonance parameters from a T-matrix pole and from a Breit-Wigner fit.
