

$\Lambda(1890)$ $3/2^+$ $I(J^P) = 0(\frac{3}{2}^+)$ Status: ***

For results published before 1974 (they are now obsolete), see our 1982 edition Physics Letters **111B** 1 (1982).

The $J^P = 3/2^+$ assignment is consistent with all available data (including polarization) and recent partial-wave analyses. The dominant inelastic modes remain unknown.

$\Lambda(1890)$ FOOTNOTES

¹ The two MARTIN 77 values are from a T-matrix pole and from a Breit-Wigner fit.

² Found in one of two best solutions.

³ The published sign has been changed to be in accord with the baryon-first convention.

⁴ Upper limits on the P_3 and F_3 waves are each 0.03.
