

**$X(3900)^{\pm}$** 

$I(J^P) = ?(1^+)$

Seen as a peak in the invariant mass distribution of the  $J/\psi\pi^{\pm}$  system by BES3 (ABLIKIM 13T) in  $e^+e^- \rightarrow \pi^+\pi^-J/\psi$  at c.m. energy of 4.42 GeV and by radiative return from  $e^+e^-$  collisions at  $\sqrt{s}$  from 9.46 to 10.86 GeV at BELLE (LIU 13B). Angular analysis of ABLIKIM 14A favors the  $J^P = 1^+$  assignment. Needs confirmation.
