b-baryon ADMIXTURE (Λ_b, Ξ_b, Ω_b)

b-baryon ADMIXTURE MEAN LIFE

Each measurement of the b-baryon mean life is an average over an admixture of various b baryons which decay weakly. Different techniques emphasize different admixtures of produced particles, which could result in a different b-baryon mean life. More b-baryon flavor specific channels are not included in the measurement.

[1] Measured mean life using fully reconstructed $\Lambda_b^0\to J/\psi\Lambda$ decays.

[2] Measured using $\Lambda\ell^-$ decay length.

[3] Measured using $p\ell^-$ decay length.

[4] This ABREU 99W result is the combined result of the $\Lambda\ell^-$, $p\ell^-$, and excess $\Lambda\mu^-$ impact parameter measurements.

[5] Measured using $\Lambda_c\ell^-$ and $\Lambda\ell^+\ell^-$.

[6] Measured using the excess of $\Lambda\ell^-$, lepton impact parameter.

[7] Measured using $\Lambda_c\ell^-$.

[8] ABREU 93F superseded by ABREU 96D.

[9] AKERS 93 superseded by AKERS 96.
[10] BUSKULIC 92I superseded by BUSKULIC 95L.

b-baryon ADMIXTURE DECAY MODES (Λ_b,Ξ_b,Ω_b)

These branching fractions are actually an average over weakly decaying *b*-baryons weighted by their production rates at the LHC, LEP, and Tevatron, branching ratios, and detection efficiencies. They scale with the *b*-baryon production fraction B($b \to$ *b*-baryon).

The branching fractions B(*b*-baryon $\to \Lambda \ell^- \overline{\nu}_\ell$ anything) and B($\Lambda_b^0 \to \Lambda_c^+ \ell^- \overline{\nu}_\ell$ anything) are not pure measurements because the underlying measured products of these with B($b \to$ *b*-baryon) were used to determine B($b \to$ *b*-baryon), as described in the note "Production and Decay of *b*-Flavored Hadrons."

For inclusive branching fractions, *e.g.*, $B \to D^\pm$ anything, the values usually are multiplicities, not branching fractions. They can be greater than one.

	Mode	Fraction (Γ_i/Γ)	Scale factor
Γ_1	$p\mu^-\overline{\nu}$ anything	($5.8^{+\ 2.3}_{-\ 2.0}$) %	
Γ_2	$p\ell\overline{\nu}_\ell$ anything	(5.6± 1.2) %	
Γ_3	p anything	(70 ±22) %	
Γ_4	$\Lambda\ell^-\overline{\nu}_\ell$ anything	(3.8± 0.6) %	
Γ_5	$\Lambda\ell^+\nu_\ell$ anything	(3.2± 0.8) %	
Γ_6	Λ anything	(39 ± 7) %	
Γ_7	$\Xi^-\ell^-\overline{\nu}_\ell$ anything	(4.6± 1.4) $\times 10^{-3}$	1.2

The values and averages in this section serve only to show what values result if one assumes our B($b \to$ b-baryon). They cannot be thought of as measurements since the underlying product branching fractions were also used to determine B($b \to$ b-baryon) as described in the note on "Production and Decay of b-Flavored Hadrons."
