

$$I(J^P) = ?(?^?) \quad \text{Status: } *$$

OMITTED FROM SUMMARY TABLE

Nominally the isospin partner of the Ξ_{cc}^{++} (ccu). While the SELEX experiment (MATTSON 02, OCHERASHVILI 05) claimed an observation of this state, subsequent searches by BABAR (AUBERT,B 06D), Belle (CHISTOV 06, KATO 14), and LHCb (AAIJ 13CD, AAIJ 20AX) did not find any significant signal or evidence for the Ξ_{cc}^+ . However, AAIJ 21AE reports that its search for $\Xi_{cc}^+ \rightarrow \Xi_c^+ \pi^+ \pi^-$, when combined with a prior search for $\Xi_{cc}^+ \rightarrow \Lambda_c^+ K^- \pi^+$ decays in AAIJ 20AX, yields a signal at 2.9σ global significance (4.0σ local).

Ξ_{cc}^+ MASS

VALUE (MeV)	EVTS	DOCUMENT ID	TECN	COMMENT
3518.9 ± 0.9 OUR AVERAGE				
3518 ± 3	6	¹ OCHERASHVI.05	SELX	Σ^- nucleus ≈ 600 GeV
3519 ± 1	16	² MATTSON 02	SELX	Σ^- nucleus ≈ 600 GeV
• • • We do not use the following data for averages, fits, limits, etc. • • •				
3623.0 ± 1.4	368 ± 193	³ AAIJ	21AE LHCb	pp at 7, 8, 13 TeV

¹ OCHERASHVILI 05 claims "an excess of 5.62 events over ... 1.38 ± 0.13 events" for a significance of 4.8σ in pD^+K^- events.

² MATTSON 02 claims "an excess of 15.9 events over an expected background of 6.1 ± 0.5 events, a statistical significance of 6.3σ " in the $\Lambda_c^+ K^- \pi^+$ invariant-mass spectrum.

The probability that the peak is a fluctuation increases from 1.0×10^{-6} to 1.1×10^{-4} when the number of bins searched is considered.

³ Uncertainties are statistical only. Because of undetermined systematic uncertainties in the extraction of this result it cannot be considered a mass measurement. AAIJ 21AE performs a combined fit to its $\Xi_{cc}^+ \rightarrow \Xi_c^+ \pi^+ \pi^-$ data and the $\Xi_{cc}^+ \rightarrow \Lambda_c^+ K^- \pi^+$ data from AAIJ 20AX, finding a global significance of 2.9σ (4.0σ local).
