

$I(J^P) = 0(\frac{1}{2}^+)$ Status: ***
 I, J, P need confirmation.

In the quark model Ω_b^- is *ssb* ground state. None of its quantum numbers has been measured.

Ω_b^- MASS

6165 ± 10 ± 13	⁸ ABAZOV	08AL D0	$p\bar{p}$ at 1.96 TeV

¹ Combines measurement using $\Omega_b^- \rightarrow J/\psi \Omega^-$ decays with results from AAIJ 160 and AAIJ 21AC taking into account correlations amongst systematic uncertainties. Uses Ξ_b^- mass $5797.33 \pm 0.24 \pm 029$ MeV from AAIJ 21.

² Uses $\Omega_b^- \rightarrow J/\psi \Omega^-$ and $\Omega_c^0 \pi^-$ decays, with the first evidence for $\Omega_b^- \rightarrow \Omega_c^0 \pi^-$ at 3.3σ significance.

³ Uses $\Omega_b^- \rightarrow J/\psi \Omega^-$ decays.

⁴ Uses $\Omega_b^- \rightarrow \Xi_c^+ K^- \pi^-$ and $\Xi_c^+ \rightarrow p K^- \pi^+$ decays. Reports the value of $6044.3 \pm 1.2 \pm 1.1^{+0.19}_{-0.22}$ MeV where the last uncertainty is due to the mass of Ξ_c^+ . We have combined the two systematic uncertainties in quadrature.

⁵ Reconstructed in $\Omega_b^- \rightarrow \Omega_c^0 \pi^-$, $\Omega_c^0 \rightarrow p K^- K^- \pi^+$ decays. Reference Ξ_b^- mass 5797.72 ± 0.6 MeV from AAIJ 14B.

⁶ Measured in $\Omega_b^- \rightarrow J/\psi \Omega^-$ with 19 ± 5 events.

⁷ Observed in $\Omega_b^- \rightarrow J/\psi \Omega^-$ decays with 16^{+6}_{-4} candidates, a significance of 5.5 sigma from a combined mass-lifetime fit.

⁸ Observed in $\Omega_b^- \rightarrow J/\psi \Omega^-$ decays with $17.8 \pm 4.9 \pm 0.8$ candidates, a significance of 5.4 sigma.

$m_{\Omega_b^-} - m_{\Lambda_b^0}$
