# STRANGE MESONS

## ( $S = \pm 1$ , $C = B = 0$ )

$$K^+ = u\bar{s}, K^0 = d\bar{s}, \bar{K}^0 = \bar{d}s, K^- = \bar{u}s, \text{ similarly for } K^{*'}s$$

**$K_0^*(700)$**

$$I(J^P) = \frac{1}{2}(0^+)$$

also known as  $\kappa$ ; was  $K_0^*(800)$

Needs confirmation. See the mini-review on scalar mesons under  $f_0(500)$  (see the index for the page number).

### $K_0^*(700)$ T-Matrix Pole $\sqrt{s}$

<sup>1</sup> Extracted from Forward Dispersion Relations using sequences of Pade approximants .

<sup>2</sup> Extracted from Breit-Wigner parameters.

<sup>3</sup> Fit to scattering phase shifts using UChPT amplitudes with explicit resonances.

<sup>4</sup> Supersedes BUGG 06. Combined analysis of ASTON 88, ABLIKIM 06C, AITALA 06, and LINK 09 using an s-dependent width with couplings to  $K\pi$  and  $K\eta'$ , and the Adler zero near thresholds.

<sup>5</sup> From a complex pole included in the fit. Using parameters from the model that fits data best.

<sup>6</sup> Reanalysis of ASTON 88, AITALA 02, and ABLIKIM 06C using for the  $\kappa$  an s-dependent width with an Adler zero near threshold.

<sup>7</sup> Using Roy-Steiner equations (ROY 71) consistent with unitarity, analyticity and crossing symmetry constraints.

<sup>8</sup> From UChPT fitted to MERCER 71, BINGHAM 72 and ESTABROOKS 78. Amplitude shown to be consistent with data of ABLIKIM 06C.

<sup>9</sup> Reanalysis of ASTON 88 data.

<sup>10</sup> Reanalysis of data from LINGLIN 73, ESTABROOKS 78, and ASTON 88 using the Inverse Amplitude Method.

<sup>11</sup> Reanalysis of ASTON 88 using interfering Breit-Wigner amplitudes. Extracted from Breit-Wigner parameters.

<sup>12</sup> Unitarized Quark Model.

- <sup>1</sup> From a fit in the  $K_0^*(700) + K^*(892) + K^*(1410)$  model.  
<sup>2</sup> From the pole position of the  $K\pi$  vector form factor using EPIFANOV 07 and constraints from  $K_{J3}$  decays in ANTONELLI 10.  
<sup>3</sup> From the pole position of the  $K\pi$  vector form factor in the complex  $s$ -plane and using EPIFANOV 07 data.  
<sup>4</sup> Systematic uncertainties not estimated.  
<sup>5</sup> Reanalysis of EPIFANOV 07 using resonance chiral theory.  
<sup>6</sup> Calculated by us from the shift by  $4.7 \pm 0.9$  MeV (statistical uncertainty only) reported in BONVICINI 02 with respect to the world average value from PDG 00.  
<sup>7</sup> With mass and width of the  $K^*(1410)$  fixed at 1412 MeV and 227 MeV, respectively.

## $K^*(892)$ MASSES AND MASS DIFFERENCES

Unrealistically small errors have been reported by some experiments. We use simple “realistic” tests for the minimum errors on the determination of a mass and width from a sample of  $N$  events:

$$\delta_{\min}(m) = \frac{\Gamma}{\sqrt{N}}, \quad \delta_{\min}(\Gamma) = 4 \frac{\Gamma}{\sqrt{N}}. \quad (1)$$

We consistently increase unrealistic errors before averaging. For a detailed discussion, see the 1971 edition of this Note.

CONSTRAINED FIT INFORMATION

An overall fit to the total width and a partial width uses 14 measurements and one constraint to determine 3 parameters. The overall fit has a  $\chi^2 = 9.8$  for 12 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

## CONSTRAINED FIT INFORMATION

An overall fit to the total width and a partial width uses 23 measurements and one constraint to determine 3 parameters. The overall fit has a  $\chi^2 = 68.4$  for 21 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

<sup>1</sup>Well described in the chiral unitary approach of GENG 07 with two poles at 1195 and 1284 MeV and widths of 246 and 146 MeV, respectively.

<sup>2</sup>From a unitarized quark-model calculation.

<sup>3</sup>From a model-dependent fit with Gaussian background to BRANDENBURG 76 data.

<sup>1</sup> Average from low and high  $t$  data.

<sup>2</sup> Assuming that decays are saturated by the  $K\rho$ ,  $K_0^*(1430)\pi$ ,  $K^*(892)\pi$ ,  $K\omega$  decay modes and neglecting interference between them. The values  $B(\omega \rightarrow \pi^+\pi^-) = (1.53^{+0.11}_{-0.13})\%$  and  $B(K_0^*(1430) \rightarrow K\pi) = (93 \pm 10)\%$  are used. Systematic uncertainties not estimated.

<sup>1</sup> Using both  $\eta \rightarrow \gamma\gamma$  and  $\eta \rightarrow \pi^+ \pi^- \pi^0$ . From a likelihood scan in the presence of several interfering scalar-meson resonances with fixed width  $\Gamma(K_0^*(1430)) = 210$  MeV.

<sup>2</sup> S-Matrix pole. Supersedes BUGG 06. Combined analysis of ASTON 88, ABLIKIM 06C, AITALA 06, and LINK 09 using an s-dependent width with couplings to  $K\pi$  and  $K\eta'$ , and the Adler zero near thresholds.

<sup>3</sup> From the isobar model with a complex pole for the  $\kappa$ .

<sup>4</sup> From a non-parametric analysis.

<sup>5</sup> A Breit-Wigner mass and width.

<sup>6</sup> S-matrix pole. Reanalysis of ASTON 88, AITALA 02, and ABLIKIM 06C including the  $\kappa$  with an s-dependent width and an Adler zero near threshold.

<sup>7</sup> S-matrix pole. Using ASTON 88 and assuming  $K_0^*(700)$ ,  $K_0^*(1950)$ .

<sup>8</sup> Using ASTON 88 and assuming  $K_0^*(700)$ .

<sup>9</sup> T-matrix pole. Reanalysis of ASTON 88 data.

<sup>10</sup> Breit-Wigner fit. Using ASTON 88.

<sup>11</sup> Assuming a low-mass scalar  $K\pi$  resonance,  $\kappa(700)$ .

<sup>12</sup> T-matrix pole. Using data from ESTABROOKS 78 and ASTON 88.

<sup>13</sup>  $J^P$  not determined, could be  $K_2^*(1430)$ .

<sup>14</sup> T-matrix pole.

<sup>15</sup> Uses a model for the background, without this background they get a mass 1340 MeV, where the phase shift passes  $90^\circ$ .

<sup>16</sup> Mass defined by pole position. From elastic  $K\pi$  partial-wave analysis.

<sup>1</sup> Using both  $\eta \rightarrow \gamma\gamma$  and  $\eta \rightarrow \pi^+ \pi^- \pi^0$ . From a likelihood scan in the presence of several interfering scalar-meson resonances with fixed mass  $M(K_0^*(1430)) = 1435$  MeV.

<sup>2</sup> S-Matrix pole. Supersedes BUGG 06. Combined analysis of ASTON 88, ABLIKIM 06C, AITALA 06, and LINK 09 using an s-dependent width with couplings to  $K\pi$  and  $K\eta'$ , and the Adler zero near thresholds.

<sup>3</sup> From the isobar model with a complex pole for the  $\kappa$ .

<sup>4</sup> From a non-parametric analysis.

<sup>5</sup> A Breit-Wigner mass and width.

<sup>6</sup> S-matrix pole. Reanalysis of ASTON 88, AITALA 02, and ABLIKIM 06C including the  $\kappa$  with an s-dependent width and an Adler zero near threshold.

<sup>7</sup> S-matrix pole. Using ASTON 88 and assuming  $K_0^*(700)$ ,  $K_0^*(1950)$ .

<sup>8</sup> Using ASTON 88 and assuming  $K_0^*(700)$ .

<sup>9</sup> T-matrix pole. Reanalysis of ASTON 88 data.

<sup>10</sup> Breit-Wigner fit. Using ASTON 88.

<sup>11</sup> Assuming a low-mass scalar  $K\pi$  resonance,  $\kappa(700)$ .

<sup>12</sup> T-matrix pole. Using data from ESTABROOKS 78 and ASTON 88.

<sup>13</sup>  $J^P$  not determined, could be  $K_2^*(1430)$ .

<sup>14</sup> T-matrix pole.

<sup>15</sup> From elastic  $K\pi$  partial-wave analysis.

**CONSTRAINED FIT INFORMATION**

An overall fit to the total width, a partial width, and 10 branching ratios uses 31 measurements and one constraint to determine 8 parameters. The overall fit has a  $\chi^2 = 20.2$  for 24 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

## CONSTRAINED FIT INFORMATION

An overall fit to 4 branching ratios uses 4 measurements and one constraint to determine 3 parameters. The overall fit has a  $\chi^2 = 2.9$  for 2 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

|       |       |       |
|-------|-------|-------|
| $x_2$ | −36   |       |
| $x_3$ | −39   | −72   |
|       | $x_1$ | $x_2$ |

**CONSTRAINED FIT INFORMATION**

An overall fit to 3 branching ratios uses 4 measurements and one constraint to determine 4 parameters. The overall fit has a  $\chi^2 = 0.0$  for 1 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \cdot \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i/\Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

OMITTED FROM SUMMARY TABLE

This entry contains various peaks in strange meson systems reported in the 2150–2260 MeV region, as well as enhancements seen in the antihyperon-nucleon system, either in the mass spectra or in the  $J^P = 2^-$  wave.

## OMITTED FROM SUMMARY TABLE

Narrow peak observed in several ( $\Lambda\bar{p}$  + pions) and ( $\bar{\Lambda}p$  + pions) states in  $\Sigma^-$  Be reactions by BOURQUIN 86 and in  $np$  and  $nA$  reactions by ALEEV 93. Not seen by BOEHNLEIN 91. If due to strong decays, this state has exotic quantum numbers ( $B=0, Q=+1, S=-1$  for  $\Lambda\bar{p}\pi^+\pi^+$  and  $I \geq 3/2$  for  $\Lambda\bar{p}\pi^-\pi^-$ ). Needs confirmation.

NEW

<sup>2</sup> Obtained by analyzing CLEO-c data but not authored by the CLEO Collaboration . This value comes from the average of the results for two decay modes,  $D^0 \rightarrow K^- \pi^+$  and  $D^0 \rightarrow K^- \pi^+ \pi^- \pi^+$ .

<sup>3</sup> From simultaneous fit to  $D^*(2010)^+$ ,  $D^*(2007)^0$ ,  $D^+$ , and  $D^0$ .

| <b>&lt;2.1</b> | 90  | <sup>4</sup> ABACHI | 88B HRS | $D^{*0} \rightarrow D^+ \pi^-$ |

<sup>4</sup> Assuming  $m_{D^{*0}} = 2007.2 \pm 2.1 \text{ MeV}/c^2$ .

### $D^*(2007)^0$ DECAY MODES

$\bar{D}^*(2007)^0$  modes are charge conjugates of modes below.

| Mode                        | Fraction ( $\Gamma_i/\Gamma$ ) |
|-----------------------------|--------------------------------|
| $\Gamma_1 \quad D^0 \pi^0$  | $(64.7 \pm 0.9) \%$            |
| $\Gamma_2 \quad D^0 \gamma$ | $(35.3 \pm 0.9) \%$            |

### CONSTRAINED FIT INFORMATION

An overall fit to 2 branching ratios uses 5 measurements and one constraint to determine 2 parameters. The overall fit has a  $\chi^2 = 2.5$  for 4 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

$$x_2 \quad \begin{vmatrix} -100 \\ x_1 \end{vmatrix}$$

### $D^*(2007)^0$ BRANCHING RATIOS

$\Gamma(D^0 \pi^0) / \Gamma(D^0 \gamma)$   $\Gamma_1 / \Gamma_2$

<sup>5</sup> Derived from the ratio  $\Gamma(D^0\pi^0) / \Gamma(D^0\gamma)$  assuming that the branching fractions of  $D^{*0} \rightarrow D^0\pi^0$  and  $D^{*0} \rightarrow D^0\gamma$  decays sum to 100%

<sup>6</sup> The BUTLER 92 and ALBRECHT 95F branching ratios are not independent, they have been constrained by the authors to sum to 100%.

## CONSTRAINED FIT INFORMATION

An overall fit to 3 branching ratios uses 6 measurements and one constraint to determine 3 parameters. The overall fit has a  $\chi^2 = 0.3$  for 4 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \cdot \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

|       |       |       |
|-------|-------|-------|
| $x_2$ | -62   |       |
| $x_3$ | -43   | -44   |
|       | $x_1$ | $x_2$ |

<sup>7</sup> The branching ratios are not independent, they have been constrained by the authors to sum to 100%.

<sup>8</sup> Systematic error includes theoretical error on the prediction of the ratio of hadronic modes.

<sup>9</sup> Assuming that isospin is conserved in the decay.

<sup>10</sup> Not independent of  $\Gamma(D^0 \pi^+) / \Gamma_{\text{total}}$  and  $\Gamma(D^+ \pi^0) / \Gamma_{\text{total}}$  measurement.

### $D_1(2420)^0$ POLARIZATION AMPLITUDE $A_{D_1}$

A polarization amplitude  $A_{D_1}$  is a parameter that depends on the initial polarization of the  $D_1$  and is sensitive to a possible  $S$ -wave contribution to its decay. For  $D_1$  decays the helicity angle,  $\theta_h$ , distribution varies like  $1 + A_{D_1} \cos^2 \theta_h$ , where  $\theta_h$  is the angle in the  $D^*$  rest frame between the two pions emitted by the  $D_1 \rightarrow D^* \pi$  and the  $D^* \rightarrow D \pi$ .

Unpolarized  $D_1$  decaying purely via  $D$ -wave is predicted to give  $A_{D_1} = 3$ .

 **$D_1(2420)^\pm$  POLARIZATION AMPLITUDE  $A_{D_1}$** 

A polarization amplitude  $A_{D_1}$  is a parameter that depends on the initial polarization of the  $D_1$  and is sensitive to a possible  $S$ -wave contribution to its decay. For  $D_1$  decays the helicity angle,  $\theta_h$ , distribution varies like  $1 + A_{D_1} \cos^2 \theta_h$ , where  $\theta_h$  is the angle in the  $D^*$  rest frame between the two pions emitted by the  $D_1 \rightarrow D^* \pi$  and the  $D^* \rightarrow D \pi$ .

Unpolarized  $D_1$  decaying purely via  $D$ -wave is predicted to give  $A_{D_1} = 3$ .

 **$D_2^*(2460)^0$  POLARIZATION AMPLITUDE  $A_{D_2}$** 

A polarization amplitude  $A_{D_2}$  is a parameter that depends on the initial polarization of the  $D_2$ . For  $D_2$  decays the helicity angle,  $\theta_H$ , distribution varies like  $1 + A_{D_2} \cos^2(\theta_H)$ , where  $\theta_H$  is the angle in the  $D^*$  rest frame between the two pions emitted by the  $D_2 \rightarrow D^*\pi$  and  $D^* \rightarrow D\pi$ .

<sup>1</sup> From the Dalitz plot analysis including various  $K^*$  and  $D^{**}$  mesons as well as broad structures in the  $K\pi$  S-wave and the  $D\pi$  S- and P-waves.

<sup>2</sup> Modeling the  $\pi^+\pi^-$  S-wave with the Isobar formalism.

<sup>3</sup> From the fit of the  $M(D^0\pi^+)$  distribution. The widths of the  $D_1^+$  and  $D_2^{*+}$  are fixed to 25 MeV and 37 MeV, and  $A_{D_1}$  and  $A_{D_2}$  are fixed to the theoretical predictions of 3 and -1, respectively.

<sup>4</sup> At a fixed width of 50.5 MeV.

<sup>5</sup> Modeling the  $\pi^+\pi^-$  S-wave with the K-matrix formalism.

<sup>6</sup> Fit includes the contribution from  $D_0^*(2400)^\pm$ . Not independent of the corresponding mass difference measurement,  $(m_{D_2^*(2460)^\pm} - (m_{D_2^*(2460)^0})$ .

D(2550)<sup>0</sup> POLARIZATION AMPLITUDE A<sub>D<sub>J</sub></sub>

NODE=M198PAM

A polarization amplitude A<sub>D<sub>J</sub></sub> is a parameter that depends on the initial polarization of the D<sub>J</sub>. For D<sub>J</sub> decays the helicity angle,  $\theta_H$ , distribution varies like  $1 + A_{D_J} \cos^2(\theta_H)$ , where  $\theta_H$  is the angle in the D<sub>J</sub> rest frame between the two pions emitted in the D<sub>J</sub> → D\*<sup>+</sup>π and D\*<sup>+</sup> → Dπ decays.

 **$D(2740)^0$  POLARIZATION AMPLITUDE  $A_{D_J}$** 

A polarization amplitude  $A_{D_J}$  is a parameter that depends on the initial polarization of the  $D_J$ . For  $D_J$  decays the helicity angle,  $\theta_H$ , distribution varies like  $1 + A_{D_J} \cos^2(\theta_H)$ , where  $\theta_H$  is the angle in the  $D_J$  rest frame between the two pions emitted in the  $D_J \rightarrow D^* \pi$  and  $D^* \rightarrow D \pi$  decays.

 **$D_3^*(2750)$  POLARIZATION AMPLITUDE  $A_D$** 

A polarization amplitude  $A_D$  is a parameter that depends on the initial polarization of the  $D_3^*(2750)$ . For  $D_3^*(2750)$  decays the helicity angle,  $\theta_H$ , distribution varies like  $1 + A_D \cos(\theta_H)$ , where  $\theta_H$  is the angle in the  $D^*$  rest frame between the two pions emitted by the  $D_3^*(2750) \rightarrow D^* \pi$  and  $D^* \rightarrow D \pi$ .

## CONSTRAINED FIT INFORMATION

An overall fit to 2 branching ratios uses 3 measurements and one constraint to determine 3 parameters. The overall fit has a  $\chi^2 = 0.0$  for 1 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \cdot \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

|       |       |       |

$$D_{s0}^*(2317)^\pm$$

$$I(J^P) = 0(0^+)$$

$J, P$  need confirmation.

AUBERT 06P and CHOI 15A do not observe neutral and doubly charged partners of the  $D_{s0}^*(2317)^+$ .

NODE=M172

### CONSTRAINED FIT INFORMATION

An overall fit to 7 branching ratios uses 8 measurements and one constraint to determine 5 parameters. The overall fit has a  $\chi^2 = 3.4$  for 4 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta x_i \delta x_j \rangle / (\delta x_i \cdot \delta x_j)$ , in percent, from the fit to the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

|       |       |       |       |
|-------|-------|-------|-------|
| $x_2$ | 80    |       |       |
| $x_3$ | 68    | 62    |       |
| $x_5$ | -3    | 25    | 26    |
|       | $x_1$ | $x_2$ | $x_3$ |

<sup>1</sup> From a fit of the  $D_s^+$  recoil mass distribution with an incoherent sum of the S-wave and D-wave Breit-Wigner line shapes.

<sup>2</sup> Using the  $D^{*}(2010)^{\pm}$  mass of  $2010.0 \pm 0.4$  MeV from PDG 06.

<sup>3</sup> Calculated using  $m(D^{*}(2010)^{\pm}) = 2010.0 \pm 0.5$  MeV,  $m(D^{*}(2007)^0) = 2006.7 \pm 0.5$  MeV, and the mass difference below.

<sup>4</sup> Systematic uncertainties not evaluated.

<sup>5</sup> Calculated using the mass difference  $m(D_{s1}^+) - m(D^{*+})_{PDG}$  below and  $m(D^{*+})_{PDG} = 2010.25 \pm 0.14$  MeV. Assuming S-wave decay of the  $D_{s1}(2536)$  to  $D^{*+} K_S^0$ , using a Breit-Wigner line shape corresponding to L=0.

<sup>6</sup> Calculated using the mass difference  $m(D_{s1}^+) - m(D^{*+})_{PDG}$  reported below and  $m(D^{*+})_{PDG} = 2010.27 \pm 0.17$  MeV.

<sup>7</sup> Calculated using  $m(D^{*}(2007)^0) = 2006.6 \pm 0.5$  MeV and the mass difference below.

<sup>8</sup> Calculated using  $m(D^{*}(2010)^{\pm}) = 2010.1 \pm 0.6$  MeV and the mass difference below.

<sup>9</sup> Not seen in  $D^{*} K$ .

 **$m_{D_{s1}(2536)^{\pm}} = m_{D_s^{*}(2111)}$**

<sup>11</sup> From a fit of the  $D_S^+$  recoil mass distribution with an incoherent sum of the  $S$ -wave and  $S$ -wave Breit-Wigner line shapes.

<sup>12</sup> Assuming  $S$ -wave decay of the  $D_{s1}(2536)$  to  $D^{*+} K_S^0$ , using a Breit-Wigner line shape corresponding to  $L=0$ .

<sup>13</sup> Systematic uncertainties not evaluated.

# BOTTOM MESONS

## ( $B = \pm 1$ )

$B^+ = u\bar{b}$ ,  $B^0 = d\bar{b}$ ,  $\bar{B}^0 = \bar{d}b$ ,  $B^- = \bar{u}b$ , similarly for  $B^{*}$ 's

$B_1(5721)^+$

$I(J^P) = \frac{1}{2}(1^+)$   
 $I, J, P$  need confirmation.

Quantum numbers shown are quark-model predictions.

### $B_1(5721)^+$ MASS

OUR FIT uses  $m_{B^{*0}}$  and  $m_{B_1^+} - m_{B^{*0}}$  to determine  $m_{B_1(5721)^+}$ .

• • • We do not use the following data for averages, fits, limits, etc. • • •

<sup>1</sup> AFFOLDER 01F uses the reconstructed  $B$  meson through semileptonic decay channels. The fraction of light  $B$  mesons that are produced at  $L=1$   $B^{**}$  states is measured to be  $0.28 \pm 0.06 \pm 0.03$ .

<sup>2</sup> BARATE 98L uses fully reconstructed  $B$  mesons to search for  $B^{**}$  production in the  $B\pi^\pm$  system. In the framework of heavy quark symmetry (HQS), they also measured the mass of  $B_2^*$  to be  $5739^{+8+6}_{-11-4}$  MeV/ $c^2$  and the relative production rate of  $B(b \rightarrow B_2^* \rightarrow B^{(*)}\pi)/B(b \rightarrow B_{u,d}) = (31 \pm 9^{+6}_{-5})\%$ .

<sup>3</sup> Using  $m_{B\pi} - m_B = 424 \pm 4 \pm 10$  MeV.

<sup>4</sup> ACCIARRI 99N uses inclusive reconstructed  $B$  mesons to search for  $B^{**}$  production in the  $B^{(*)}\pi^\pm$  system. In the framework of HQET, they measured the mass of  $B_1^*$  and  $B_2^*$  to be  $5670 \pm 10 \pm 13$  MeV and  $5768 \pm 5 \pm 6$  with the  $B(b \rightarrow B^{**}) = (32 \pm 3 \pm 6) \times 10^{-2}$ . They also reported the evidence for the existence of an excited  $B$ -meson state or mixture of states in the region 5.9–6.0 GeV.

## ( $B = \pm 1, S = \mp 1$ )

$$B_s^0 = s\bar{b}, \bar{B}_s^0 = \bar{s}b, \quad \text{similarly for } B_s^{*\prime}s$$

### X(5568) $^\pm$

$$I(J^P) = ?(??)$$

OMITTED FROM SUMMARY TABLE

Seen as a peak in the  $B_s\pi^\pm$  mass spectrum with a significance of more than  $3\sigma$  by ABAZOV 16E and ABAZOV 18A in inclusive  $p\bar{p}$  collisions at 1.96 TeV. Not seen by AAIJ 16AI, AABOUD 18L, AALTONEN 18A, and SIRUNYAN 18J. Needs confirmation.

- <sup>1</sup> With  $B_s$  mesons reconstructed in decays to  $D_s^\pm \mu^\mp X$ .
- <sup>2</sup> Seen in  $p\bar{p}$  collisions at 1.96 TeV at a rate of  $(8.6 \pm 1.9 \pm 1.4)\%$  relative to inclusive  $B_s$  production in the kinematic region  $10 < p_T(B_s) < 30$  GeV/c, with  $B_s$  mesons reconstructed in decays to  $J/\psi\phi$ . An alternative possibility,  $X(5568)^\pm \rightarrow B_s^* \pi^\pm$  with a missing  $\gamma$ , could not be ruled out.
- <sup>3</sup> Not seen in  $24.4 \text{ fb}^{-1}$  of  $pp$  collision data at  $\sqrt{s} = 7$  and 8 TeV with  $B_s$  mesons reconstructed in decays to  $J/\psi\phi$ . An upper limit on the production rate times branching fraction for  $X(5568)^\pm \rightarrow B_s \pi^\pm$  relative to inclusive  $B_s$  production is less than 1.5% at  $p_T(B_s) > 10$  GeV/c and less than 1.6% at  $p_T(B_s) > 15$  GeV/c at 95% CL.
- <sup>4</sup> Not seen in  $9.6 \text{ fb}^{-1}$  of  $p\bar{p}$  collision data at  $\sqrt{s} = 1.96$  TeV with  $B_s$  mesons reconstructed in decays to  $J/\psi\phi$ . An upper limit on the production rate times branching fraction for  $X(5568)^\pm \rightarrow B_s \pi^\pm$  relative to inclusive  $B_s$  production is less than 6.7% at 95% CL.
- <sup>5</sup> Not seen in  $19.7 \text{ fb}^{-1}$  of  $pp$  collisions data at  $\sqrt{s} = 8$  TeV with  $B_s$  mesons reconstructed in decays to  $J/\psi\phi$ . An upper limit on the production rate times branching fraction for  $X(5568)^\pm \rightarrow B_s \pi^\pm$  relative to inclusive  $B_s$  production is less than 1.1% at  $p_T(B_s) > 10$  GeV/c and less than 1.0% at  $p_T(B_s) > 15$  GeV/c at 95% CL.
- <sup>6</sup> Not seen in  $3 \text{ fb}^{-1}$  of  $pp$  collision data at  $\sqrt{s} = 7$  and 8 TeV in a scan over the  $X(5568)$  mass and width, with  $B_s$  mesons reconstructed in decays to  $D_s^- \pi^+$  or  $J/\psi\phi$ . An upper limit on the production rate times branching fraction for  $X(5568)^\pm \rightarrow B_s \pi^\pm$  relative to inclusive  $B_s$  production is less than 2.1% at  $p_T(B_s) > 10$  GeV/c at 90% CL.

<sup>1</sup> The second systematic uncertainty reflects the PDG uncertainty on the  $B_c^+$  mass. Observed in the decay mode  $B_c(2S)^+ \rightarrow B_c^+ \pi^+ \pi^-$  ( $B_c^+ \rightarrow J/\psi \pi^+$ ) with 6.5 standard deviations significance.

<sup>2</sup> AAIJ 18AL reports an upper limit on the ratio of production cross sections for  $[\sigma(B_c(2S)^+)/\sigma(B_c^+)] \cdot \mathcal{B}(B_c(2S)^+ \rightarrow B_c^+ \pi^+ \pi^-) < 0.04-0.09$  at 95% CL for the mass value reported by AAD 14AQ.

<sup>3</sup> Observed in the decay mode  $B_c(2S)^+ \rightarrow B_c^+ \pi^+ \pi^-$  ( $B_c^+ \rightarrow J/\psi \pi^+$ ) with 5.2 standard deviations significance.

<sup>4</sup> Might be the  $B_c^*(2S)$ .

<sup>1</sup> AAIJ 17AD report  $m_{J/\psi} - m_{\eta_c(1S)} = 110.2 \pm 0.5 \pm 0.9$  MeV. We use the current value  $m_{J/\psi} = 3096.900 \pm 0.006$  MeV to obtain the quoted mass.

<sup>2</sup> From a fit of the  $\phi\phi$  invariant mass with the mass and width of  $\eta_c(1S)$  as free parameters.

<sup>3</sup> AAIJ 15BI reports  $m_{J/\psi} - m_{\eta_c(1S)} = 114.7 \pm 1.5 \pm 0.1$  MeV from a sample of  $\eta_c(1S)$  and  $J/\psi$  produced in  $b$ -hadron decays. We have used current value of  $m_{J/\psi} = 3096.900 \pm 0.006$  MeV to arrive at the quoted  $m_{\eta_c(1S)}$  result.

<sup>4</sup> Taking into account an asymmetric photon lineshape.

<sup>5</sup> With floating width.

<sup>6</sup> Ignoring possible interference with the non-resonant  $0^-$  amplitude.

<sup>7</sup> Using both,  $\eta \rightarrow \gamma\gamma$  and  $\eta \rightarrow \pi^+\pi^-\pi^0$  decays.

<sup>8</sup> From a simultaneous fit to six decay modes of the  $\eta_c$ .

<sup>9</sup> Accounts for interference with non-resonant continuum.

<sup>10</sup> Taking into account interference with the non-resonant  $J^P = 0^-$  amplitude.

<sup>11</sup> From a fit of the  $J/\psi$  recoil mass spectrum. Supersedes ABE,K 02 and ABE 04G.

<sup>12</sup> Using mass of  $\psi(2S) = 3686.00$  MeV.

<sup>13</sup> Not independent from the measurements reported by LEES 10.

<sup>14</sup> MITCHELL 09 observes a significant asymmetry in the lineshapes of  $\psi(2S) \rightarrow \gamma \eta_c$  and  $J/\psi \rightarrow \gamma \eta_c$  transitions. If ignored, this asymmetry could lead to significant bias whenever the mass and width are measured in  $\psi(2S)$  or  $J/\psi$  radiative decays.

<sup>15</sup> From the fit of the kaon momentum spectrum. Systematic errors not evaluated.

<sup>16</sup> Superseded by LEES 10.

<sup>17</sup> From a simultaneous fit of five decay modes of the  $\eta_c$ .

<sup>18</sup> Superseded by VINOKUROVA 11.

<sup>19</sup> Weighted average of the  $\psi(2S)$  and  $J/\psi(1S)$  samples. Using an  $\eta_c$  width of 13.2 MeV.

<sup>20</sup> Average of several decay modes. Using an  $\eta_c$  width of 13.2 MeV.

<sup>21</sup> Superseded by ASNER 04.

<sup>22</sup> Average of several decay modes.

<sup>23</sup>  $\eta_c \rightarrow \phi\phi$ .

<sup>24</sup> Mass adjusted by us to correspond to  $J/\psi(1S)$  mass = 3097 MeV.

OCCUR=2

<sup>1</sup> From a fit of the  $\phi\phi$  invariant mass with the mass and width of  $\eta_c(1S)$  as free parameters.

<sup>2</sup> Taking into account an asymmetric photon lineshape.

<sup>3</sup> With floating mass.

<sup>4</sup> Ignoring possible interference with the non-resonant  $0^-$  amplitude.

<sup>5</sup> Using both,  $\eta \rightarrow \gamma\gamma$  and  $\eta \rightarrow \pi^+\pi^-\pi^0$  decays.

<sup>6</sup> From a simultaneous fit to six decay modes of the  $\eta_c$ .

<sup>7</sup> Accounts for interference with non-resonant continuum.

<sup>8</sup> Taking into account interference with the non-resonant  $J^P = 0^-$  amplitude.

<sup>9</sup> Not independent from the measurements reported by LEES 10.

<sup>10</sup> Superseded by LEES 10.

<sup>11</sup> From a simultaneous fit of five decay modes of the  $\eta_c$ .

<sup>12</sup> Superseded by VINOKUROVA 11.

<sup>13</sup> From a fit to the 4-prong invariant mass in  $\psi(2S) \rightarrow \gamma\eta_c$  and  $J/\psi(1S) \rightarrow \gamma\eta_c$  decays.

<sup>14</sup> Superseded by ASNER 04.

<sup>15</sup> Positive and negative errors correspond to 90% confidence level.

**CONSTRAINED FIT INFORMATION**

An overall fit to the total width, 8 combinations of partial widths obtained from integrated cross section, and 19 branching ratios uses 89 measurements and one constraint to determine 13 parameters. The overall fit has a  $\chi^2 = 120.0$  for 77 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ . The fit constrains the  $x_i$  whose labels appear in this array to sum to one.

<sup>1</sup> From the corrected and unfolded mass spectrum.

<sup>2</sup> Calculated by us from the value reported in ASNER 04 that assumes  $B(\eta_c \rightarrow K \bar{K} \pi) = 5.5 \pm 1.7\%$

<sup>3</sup> We have multiplied  $K^\pm K_S^0 \pi^\mp$  measurement by 3 to obtain  $K \bar{K} \pi$ .

<sup>4</sup> Calculated by us from the value reported in ABDALLAH 03J, which uses  $B(\eta_c \rightarrow K_S^0 K^\pm \pi^\mp) = (1.5 \pm 0.4)\%$ .

<sup>5</sup> Not independent from the measurements reported by LEES 10.

<sup>6</sup> Superseded by ASNER 04.

OCCUR=2

- <sup>1</sup> From  $J/\psi \rightarrow \pi^+ \pi^- \pi^0$  events directly.
- <sup>2</sup> The quoted systematic error includes a contribution of 1.23% (added in quadrature) from the uncertainty on the number of  $J/\psi$  events.
- <sup>3</sup> AUBERT 07AU reports  $[\Gamma(J/\psi(1S) \rightarrow \pi^+ \pi^- \pi^0)/\Gamma_{\text{total}}] \times [\Gamma(\psi(2S) \rightarrow J/\psi(1S) \pi^+ \pi^-) \times \Gamma(\psi(2S) \rightarrow e^+ e^-)/\Gamma_{\text{total}}] = (18.6 \pm 1.2 \pm 1.1) \times 10^{-3}$  keV which we divide by our best value  $\Gamma(\psi(2S) \rightarrow J/\psi(1S) \pi^+ \pi^-) \times \Gamma(\psi(2S) \rightarrow e^+ e^-)/\Gamma_{\text{total}} = 0.808 \pm 0.013$  keV. Our first error is their experiment's error and our second error is the systematic error from using our best value.
- <sup>4</sup> Mostly  $\rho\pi$ , see also  $\rho\pi$  subsection.
- <sup>5</sup> Obtained comparing the rates for  $\pi^+ \pi^- \pi^0$  and  $\mu^+ \mu^-$ , using  $J/\psi$  events produced via  $\psi(2S) \rightarrow \pi^+ \pi^- J/\psi$  and with  $B(J/\psi \rightarrow \mu^+ \mu^-) = 5.88 \pm 0.10\%$ .

<sup>1</sup>WU 06 reports  $[\Gamma(J/\psi(1S) \rightarrow \Lambda\bar{\Lambda})/\Gamma_{\text{total}}] \times [B(B^+ \rightarrow J/\psi(1S)K^+)] = (2.00^{+0.34}_{-0.29} \pm 0.34) \times 10^{-6}$  which we divide by our best value  $B(B^+ \rightarrow J/\psi(1S)K^+) = (9.71 \pm 0.31) \times 10^{-4}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>1</sup> MITCHELL 09 reports  $(1.98 \pm 0.09 \pm 0.30) \times 10^{-2}$  from a measurement of  $[\Gamma(J/\psi(1S) \rightarrow \gamma\eta_c(1S))/\Gamma_{\text{total}}] \times [B(\psi(2S) \rightarrow J/\psi(1S)\pi^+\pi^-)]$  assuming  $B(\psi(2S) \rightarrow J/\psi(1S)\pi^+\pi^-) = (35.04 \pm 0.07 \pm 0.77) \times 10^{-2}$ , which we rescale to our best value  $B(\psi(2S) \rightarrow J/\psi(1S)\pi^+\pi^-) = (34.68 \pm 0.30) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>2</sup> Calculated by the authors using an average of  $B(J/\psi \rightarrow \gamma\eta_c) \times B(\eta_c \rightarrow K\bar{K}\pi)$  from BALTRUSAITIS 86, BISELLO 91, BAI 04 and  $B(\eta_c \rightarrow K\bar{K}\pi) = (8.5 \pm 1.8)\%$  from AUBERT 06E.

<sup>1</sup> Using CLEO-c data but not authored by the CLEO Collaboration.

<sup>2</sup> DOBBS 15 reports  $[\Gamma(J/\psi(1S) \rightarrow \gamma f_2(1270))/\Gamma_{\text{total}}] \times [B(f_2(1270) \rightarrow \pi\pi)] = (1.744 \pm 0.052 \pm 0.122) \times 10^{-3}$  which we divide by our best value  $B(f_2(1270) \rightarrow \pi\pi) = (84.2^{+2.9}_{-0.9}) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

NODE=M070R86;LINKAGE=A  
NODE=M070R86;LINKAGE=DO

<sup>3</sup> ABLIKIM 06V reports  $[\Gamma(J/\psi(1S) \rightarrow \gamma f_2(1270))/\Gamma_{\text{total}}] \times [B(f_2(1270) \rightarrow \pi\pi)] = (1.371 \pm 0.010 \pm 0.222) \times 10^{-3}$  which we divide by our best value  $B(f_2(1270) \rightarrow \pi\pi) = (84.2^{+2.9}_{-0.9}) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

NODE=M070R86;LINKAGE=AI

<sup>4</sup> ABLIKIM 06V reports  $[\Gamma(J/\psi(1S) \rightarrow \gamma f_2(1270))/\Gamma_{\text{total}}] \times [B(f_2(1270) \rightarrow \pi\pi)] = (1.200 \pm 0.027 \pm 0.174) \times 10^{-3}$  which we divide by our best value  $B(f_2(1270) \rightarrow \pi\pi) = (84.2^{+2.9}_{-0.9}) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

NODE=M070R86;LINKAGE=AL

<sup>5</sup> Estimated using  $B(f_2(1270) \rightarrow \pi\pi) = 0.843 \pm 0.012$ . The errors do not contain the uncertainty in the  $f_2(1270)$  decay.

NODE=M070R86;LINKAGE=X

<sup>6</sup> Restated by us to take account of spread of E1, M2, E3 transitions.

NODE=M070R78;LINKAGE=A

<sup>1</sup> From a fit of the measured  $\pi^+\pi^-\eta'$  lineshape that accounts for the abrupt distortion observed at the  $p\bar{p}$  threshold with a Flatté formula in addition to known backgrounds and contributors, as well as an *ad hoc* Breit-Wigner ( $M \approx 1919$  MeV;  $\Gamma \approx 51$  MeV) that is required for a good fit. Another explanation for the distortion provided by ABLIKIM 16J is that a second resonance near 1870 MeV interferes with the  $X(1835)$ ; fits to this possibility yield product branching fraction values compatible with that shown within the respective systematic uncertainties.

<sup>2</sup> From a fit of the  $\pi^+\pi^-\eta'$  mass distribution to a combination of  $\gamma f_1(1510)$ ,  $\gamma X(1835)$ , and two unconfirmed states  $\gamma X(2120)$ , and  $\gamma X(2370)$ , for  $M(p\bar{p}) < 2.8$  GeV, and accounting for backgrounds from non- $\eta'$  events and  $J/\psi \rightarrow \pi^0\pi^+\pi^-\eta'$ .

<sup>1</sup> From a fit of the  $\phi\phi$  invariant mass with the width of  $\chi_{c0}(1P)$  fixed to the PDG 16 value.

<sup>2</sup> From a fit of the  $J/\psi$  recoil mass spectrum. Supersedes ABE,K 02 and ABE 04G.

<sup>3</sup> Using mass of  $\psi(2S) = 3686.0$  MeV.

<sup>4</sup> Recalculated by ANDREOTTI 05A, using the value of  $\psi(2S)$  mass from AULCHENKO 03.

<sup>5</sup> Mass value shifted by us by amount appropriate for  $\psi(2S)$  mass = 3686 MeV and  $J/\psi(1S)$  mass = 3097 MeV.

## CONSTRAINED FIT INFORMATION

A multiparticle fit to  $\chi_{c1}(1P)$ ,  $\chi_{c0}(1P)$ ,  $\chi_{c2}(1P)$ , and  $\psi(2S)$  with 4 total widths, a partial width, 25 combinations of partial widths obtained from integrated cross section, and 84 branching ratios uses 248 measurements to determine 49 parameters. The overall fit has a  $\chi^2 = 378.1$  for 199 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ .

**33.6 ± 2.3 OUR FIT**

• • • We do not use the following data for averages, fits, limits, etc. • • •

26.6 ± 2.6 ± 1.4      392    1,2 BAGNASCO    02    E835     $\bar{p}p \rightarrow \chi_{c0} \rightarrow J/\psi \gamma$

48.7  $^{+11.3}_{-8.9} \pm 2.4$       1,2 AMBROGIANI    99B    E835     $\bar{p}p \rightarrow \gamma J/\psi$

<sup>1</sup> Calculated by us using  $B(J/\psi(1S) \rightarrow e^+ e^-) = 0.0593 \pm 0.0010$ .

<sup>2</sup> Values in  $(\Gamma(p\bar{p}) \times \Gamma(\gamma J/\psi(1S)) / \Gamma_{\text{total}})$  and  $(\Gamma(p\bar{p}) / \Gamma_{\text{total}} \times \Gamma(\gamma J/\psi(1S)) / \Gamma_{\text{total}})$  are not independent. The latter is used in the fit since it is less correlated to the total width.

<sup>1</sup>We multiplied the measurement by 3 to convert from  $\pi^0\pi^0$  to  $\pi\pi$ . Interference with the continuum included.

<sup>2</sup>We have multiplied  $\pi^+\pi^-$  measurement by 3/2 to obtain  $\pi\pi$ .

<sup>1</sup> ABLIKIM 19J reports  $[\Gamma(\chi_{c0}(1P) \rightarrow \omega\phi)/\Gamma_{\text{total}}] \times [B(\psi(2S) \rightarrow \gamma\chi_{c0}(1P))] = (13.83 \pm 0.70 \pm 1.01) \times 10^{-6}$  which we divide by our best value  $B(\psi(2S) \rightarrow \gamma\chi_{c0}(1P)) = (9.79 \pm 0.20) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>2</sup> ABLIKIM 11K reports  $(1.2 \pm 0.1 \pm 0.2) \times 10^{-4}$  from a measurement of  $[\Gamma(\chi_{c0}(1P) \rightarrow \omega\phi)/\Gamma_{\text{total}}] \times [B(\psi(2S) \rightarrow \gamma\chi_{c0}(1P))]$  assuming  $B(\psi(2S) \rightarrow \gamma\chi_{c0}(1P)) = (9.62 \pm 0.31) \times 10^{-2}$ , which we rescale to our best value  $B(\psi(2S) \rightarrow \gamma\chi_{c0}(1P)) = (9.79 \pm 0.20) \times 10^{-2}$ . Our first error is their experiment's error and our second error is the systematic error from using our best value.

<sup>3</sup> Superseded by ABLIKIM 19J.

OCCUR=2

- <sup>1</sup> From a fit of the  $\phi\phi$  invariant mass with the width of  $\chi_{c1}(1P)$  fixed to the PDG 16 value.  
<sup>2</sup> AAIJ 17BI reports also  $m(\chi_{c2}) - m(\chi_{c1}) = 45.39 \pm 0.07 \pm 0.03$  MeV.  
<sup>3</sup> Recalculated by ANDREOTTI 05A, using the value of  $\psi(2S)$  mass from AULCHENKO 03.  
<sup>4</sup> Using mass of  $\psi(2S) = 3686.0$  MeV.  
<sup>5</sup>  $J/\psi(1S)$  mass constrained to 3097 MeV.  
<sup>6</sup> Mass value shifted by us by amount appropriate for  $\psi(2S)$  mass = 3686 MeV and  $J/\psi(1S)$  mass = 3097 MeV.  
<sup>7</sup> From a simultaneous fit to radiative and hadronic decay channels.

### CONSTRAINED FIT INFORMATION

A multiparticle fit to  $\chi_{c1}(1P)$ ,  $\chi_{c0}(1P)$ ,  $\chi_{c2}(1P)$ , and  $\psi(2S)$  with 4 total widths, a partial width, 25 combinations of partial widths obtained from integrated cross section, and 84 branching ratios uses 248 measurements to determine 49 parameters. The overall fit has a  $\chi^2 = 378.1$  for 199 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ .

<sup>1</sup>With floating width.

<sup>2</sup>Combination of exclusive and inclusive analyses for the reaction  $\psi(2S) \rightarrow \pi^0 h_c \rightarrow \pi^0 \eta_c \gamma$ . This result is the average of DOBBS 08A and ROSNER 05.

<sup>3</sup>Superseded by DOBBS 08A.

<sup>4</sup>Mass central value and systematic error recalculated by us according to Eq.(16) in ARMSTRONG 93B, using the value for the  $\psi(2S)$  mass from AULCHENKO 03.

• • • We do not use the following data for averages, fits, limits, etc. • • •

- <sup>1</sup> From a fit of the  $\phi\phi$  invariant mass with the width of  $\chi_{c2}(1P)$  fixed to the PDG 16 value.
- <sup>2</sup> AAIJ 17BI reports also  $m(\chi_{c2}) - m(\chi_{c1}) = 45.39 \pm 0.07 \pm 0.03$  MeV.
- <sup>3</sup> Recalculated by ANDREOTTI 05A, using the value of  $\psi(2S)$  mass from AULCHENKO 03.
- <sup>4</sup> Using mass of  $\psi(2S) = 3686.0$  MeV.
- <sup>5</sup>  $J/\psi(1S)$  mass constrained to 3097 MeV.
- <sup>6</sup> Assuming  $\psi(2S)$  mass = 3686 MeV and  $J/\psi(1S)$  mass = 3097 MeV.
- <sup>7</sup> Mass value shifted by us by amount appropriate for  $\psi(2S)$  mass = 3686 MeV and  $J/\psi(1S)$  mass = 3097 MeV.
- <sup>8</sup> From a simultaneous fit to radiative and hadronic decay channels.

**CONSTRAINED FIT INFORMATION**

A multiparticle fit to  $\chi_{c1}(1P)$ ,  $\chi_{c0}(1P)$ ,  $\chi_{c2}(1P)$ , and  $\psi(2S)$  with 4 total widths, a partial width, 25 combinations of partial widths obtained from integrated cross section, and 84 branching ratios uses 248 measurements to determine 49 parameters. The overall fit has a  $\chi^2 = 378.1$  for 199 degrees of freedom.

The following *off-diagonal* array elements are the correlation coefficients  $\langle \delta p_i \delta p_j \rangle / (\delta p_i \cdot \delta p_j)$ , in percent, from the fit to parameters  $p_i$ , including the branching fractions,  $x_i \equiv \Gamma_i / \Gamma_{\text{total}}$ .

<sup>1</sup>AAIJ 17AD report  $m_{\psi(2S)} - m_{\eta_c(2S)} = 52.5 \pm 1.7 \pm 0.6$  MeV. We use the current value  $m_{\psi(2S)} = 3686.097 \pm 0.025$  MeV to obtain the quoted mass.

<sup>2</sup>From a fit of the  $\phi\phi$  invariant mass with the width of  $\eta_c(2S)$  fixed to the PDG 16 value.

<sup>3</sup>Ignoring possible interference with continuum.

<sup>4</sup>With a width fixed to 11.3 MeV.

<sup>5</sup>With a width fixed to 11.3 MeV. Using both  $\eta \rightarrow \gamma\gamma$  and  $\eta \rightarrow \pi^+\pi^-\pi^0$  decays.

<sup>6</sup>From a simultaneous fit to  $K_S^0 K^\pm \pi^\mp$  and  $K^+K^-\pi^0$  decay modes.

<sup>7</sup>Accounts for interference with non-resonant continuum.

<sup>8</sup>From a fit of the  $J/\psi$  recoil mass spectrum. Supersedes ABE,K 02 and ABE 04G.

<sup>9</sup>From the fit of the kaon momentum spectrum. Systematic errors not evaluated.

<sup>10</sup>Superseded by DEL-AMO-SANCHEZ 11M.

<sup>11</sup>Superseded by VINOKUROVA 11.

<sup>12</sup>Assuming mass of  $\psi(2S) = 3686$  MeV.
